

Introduction to the stamps from booklets

Thursday 3 November 2016, by [bernardste](#)

The stamp 0,50F Marianne de Béquet has been produced in the form of closed, gummed and folded booklets of 10 and 20 stamps, only with metropolitan gum. After having described the process of making up these booklets, we will present the ten types of booklets which were issued. We will show some test booklets done in relation with the stamp 0,50F Marianne de Béquet and two booklets produced for PTTs postal courses. Let us also note that we will present some varieties affecting booklets in the section about issued booklets.
